

# Is The Expiration Date Always True?

## Discussion

Do you pay close attention to the expiration date?

No, I don't.

The supermarket will do it in advance. I don't need to pay more attention.  
In some supermarkets.

If the expiration date is approaching...

If the food is about to expire...

There are some supermarket in which if the expiration date is approaching, they will offer discounts.

I am a careless person.

I need to pay attention to the food in my apartment.

I really like buying some food and putting it in my apartment.

I don't pay attention to the food in my apartment.

I don't know when the food, in my apartment, is about to expire.

When my brother and sister-in-law came, they found a lot of expired food.

Have you ever eaten or bought something that has expired?

No, I haven't had this experience.

How do you know, if you don't pay attention to it?

I taste and smell food before eating it. If I feel that taste is not fresh or the smell is not correct, I would not eat it. I would assume that the food has expired.

This food is spoiled.

When you eat out, are you concerned with the freshness of the food?

I always eat at high end restaurants.

I spend a lot of money on eating and learning.

Nowadays I don't spend a lot of money on clothing(clothes).

There is a expiration date printed on the bottom of the package.

It's easily seen when the food expires.

With which foods you should be very careful?

I have to be careful with milk, meat(raw), eggs, fruit and juices.

Juices are very easy to be spoiled.

What do you think about food preservatives?

Food preservatives are not good substances.

It's not good for our body and health.

When food is full of preservatives, like mooncakes, it can be kept of years.

There is milk in my supermarkets that can last for months, almost half of a year. Natural milk cannot last for a long time.

I buy milk directly from farmers, because I know they don't put any chemicals.

This is another advantage of living in a town.

This would be hard to do in Belgrade, but in a small town, it's easy, there are many villages nearby.

Degrees Celsius = (Degrees Fahrenheit - 32) \* 5/9  
 $T = (100 - 32) * 5 / 9 = 68 * 5 / 9 = 37.7$  degrees Celsius

*When choosing a lesson, try to focus on the same topic for extended period of time, this way you can use the words for previous classes, you can move mileage from the words you learn.*

## Vocabulary

### Useful Words

1. +=/\*(basic arithmetic operation):addition, subtraction, division, multiplication. ( 1 + 1 - one plus one; 1 - 1 - one minus one; 1 / 1 one divided by one; 1 \* multiplied by one.
